ABSTRACTED-PUB-NO: DE19653608A

BASIC-ABSTRACT:

A film with a textile feel comprises a foamed layer or a carrier film laminated on one or both sides with a foamed layer. The foamed layer has a thickness of 5-200 μ m and comprises a mixture of low density polyethylene (LDPE) and/or very low density polyethylene (LLDPE) and/or polypropylene (PP) and contains 0.5-10 % propellant, up to 80 % matting agent and up to 10 % other standard additives. The carrier film with a thickness of 10-100 μ m, prepared by (co)extrusion, comprises LDPE, LLDPE and/or PP and also propellant, matting agent and other standard additives.

The preparation of these films by simultaneous (co)extrusion and foaming at 150-210 deg. C is also claimed.

USE - The films are used in hygiene articles, preferably plastic pants, nappies, panty liners or sanitary towels (claimed). Bedding, especially sheets, or rainproof clothing can also be made from these films.

ADVANTAGE - The soft, supple and textile feel of the films allows them to be worn next to the skin without the usual tacky or cold sensations normally associated with smooth films.
